

Reducing transport related suicide risk

Suicide is not inevitable; suicide is preventable

WHY TRL?

Large team of industry leading consultants with expertise in all areas of transport safety, behavioural science, and risk management

A data-led approach to risk management throughout your business.

*For your customers,
your employees,
your suppliers*

TRL are actively supporting National Highways' Suicide Prevention Team in their ambition to reduce the occurrence of suicide incidents on the SRN

Make a difference, by adopting a pro-active strategy to suicide prevention

- Improve data collection about suicide incidents, following the example of the rail industry
- Identify risk factors from high-frequency locations and extrapolate to identify other assets at risk on your network
- Introduce a proactive risk-based approach to the design and delivery of new assets or retrofit of existing assets
- Develop data tools and standardised processes to support design teams
- Issue practical design guidance including hard and soft measures, based on industry best practice
- Develop relevant guidance products for anyone whose job involves identifying and managing suicide risk – e.g. information sheets, helplines, self-managed learning

Please get in touch to talk to us about how we can help support your organisation in taking a pro-active approach to preventing suicide involving all forms of transport
