

PPN 06/21 - Carbon Reduction Plan

Supplier name: TRL Ltd

Publication date: January 2022

Commitment to achieving Net Zero

TRL is committed to achieving Net Zero emissions by **2028**.

As a Research and Technology Organisation in transport, we support the creation and development of innovative and sustainable transport solutions aligned with the Paris Agreement and UN Sustainable Development Goals. TRL are actively contributing to the decarbonisation of transport, which currently accounts for over a third of all UK GHG emissions, ensuring these solutions are cost-effective, scalable, tractable, and resilient.

We are leading the decarbonisation agenda to support the UK Government, it's executive agencies and the industry as a whole to achieve net zero by 2050.

Baseline Emissions Footprint

Baseline emissions are a record of the greenhouse gases that have been produced in the past and were produced prior to the introduction of any strategies to reduce emissions. Baseline emissions are the reference point against which emissions reduction can be measured. Our Carbon Baseline includes our greenhouse gas (GHG) emissions from the seven GHG's named by the Kyoto Protocol

Our emissions are calculated using the appropriate UK emission conversion factors published annually by BEIS^{1,2} (2018-2021). As the Group is a 'people' business, we have also calculated annual 'GHG Emissions per Employee' based on the average number of Full-Time Employee equivalents (FTE) during the year (tCO₂e/FTE).

Baseline Year: 2019	
Additional Details relating to the Baseline Emissions calculations.	
The financial year ending in June 2019 is our first full year of carbon emissions data. This is our baseline data to model our net zero targets. We are committed to accelerate our Science Based Targets and expect to reach net zero by 2028.	
Baseline year emissions:

Current Emissions Reporting

Reporting Year: 2021	
EMISSIONS	TOTAL (tCO₂e)
Scope 1	15
Scope 2	92

Scope 3 (Included Sources)	91		
	1	Purchased goods and services	0.0
	2	Capital goods	N/A
	3	Fuel- and energy-related activities (not included in scope 1 or scope 2)	N/A
	4	Upstream transportation and distribution	N/A
	5	Waste generated in operations	0.0
	6	Business travel	30.9
	7	Employee commuting	59.3
	8	Upstream leased assets	N/A
	9	Downstream transportation and distribution	N/A
	10	Processing of sold products	N/A
	11	Use of sold products	N/A
	12	End-of-life treatment of sold products	N/A
	13	Downstream leased assets	N/A
	14	Franchises	N/A
15	Investments	N/A	
Please note, N/A where category does not apply to TRL operations or has been reviewed and deemed immaterial.			
Total Emissions	198 (<0.8 tCO₂e/FTE)		

Emissions reduction targets

TRL has an environmental management system, and is ISO14001 certified. To continue our progress to achieving net zero, we are committed to reach this by 2028, exceeding SBTi targets. We believe this offers the best prospect to keep global warming under the 1.5°C scenario.

Our GHG emissions have decreased by almost 90% from the baseline year (2019) to our last financial year (2021). However, COVID-19 policies have been a contributory factor in the reduction of emissions. These are expected to increase again in 2022 when travel and other restrictions are alleviated. However, we have implemented several policies that will enable us to decrease these again rapidly to reach net zero by 2028. Progress against these targets can be seen in Figure 1.

We also support our clients to reach net zero, for example we created the ASPECT tool for carbon accounting of certain materials, which is mandated by National Highways MCHW Series 9000 (PAS 2050 – Life cycle GHG emissions of goods and services).

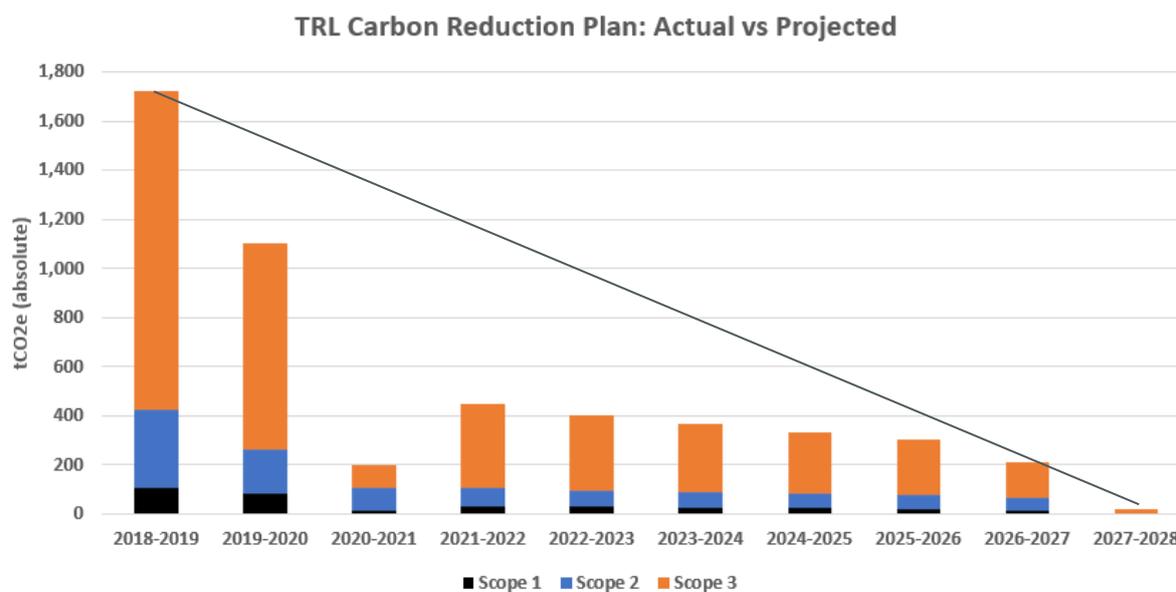

Figure 1 TRL GHG emissions – Actual (until 2021) vs projected (2022-2028).

Carbon Reduction Projects

Completed Carbon Reduction Initiatives

The following environmental management measures and projects have been completed or implemented since the 2019 baseline. The carbon emission reduction achieved by these schemes equate to 1,527 tCO₂e, an 88.5% reduction against the 2019 baseline. We intend the measures to be in effect when performing the contract. We are an RTO organisation operating in the consulting space and as such almost half of our emissions relate to human capital. Employees commuting to work, and business trips represented 75% of our emissions in 2019. We have completed 2 key initiatives to mitigate these emissions:

- Digital first

We have launched our ‘digital first’ strategy to minimise unnecessary business travel and issue improved employee guidance prioritising active travel, public transport, and zero tailpipe emission transport modes when available. We have updated our travel policy to discourage air travel within the UK. Online attendance for stakeholder activities, conferences, and workshops, will be the default. This is also the approach that we put forward in all work delivered to our clients.

- Remote working

The majority of our staff now have the permanent option to work remotely or from their homes. We have reduced the use of our estate by 40% (effectively halving the office space that we occupy in our main sites). With Covid-19 restrictions ending, we expect some employees to return to working from the office and laboratory spaces and this is included as part of our ongoing decarbonisation plan.

Other initiatives with smaller impact include:

- Enabling zero carbon commuting

Our facilities have been fitted with recharging points for electric vehicles.

- Waste Minimisation

Our waste footprint is almost negligible. We maximise the reuse of IT equipment to minimise electrical IT waste and recycling. In January 2021 we donated 31 laptops and 3 servers to Edgbarrow School, Crowthorne.

We are actively working towards net zero and we have a plan of further measures that include the following:

Corporate:

- Negotiate a net zero memoranda with our landlords and switching to certified green energy tariffs no later than 2027 (power and heat). Reach 70% of LED lighting by 2027 from current 50%.
- Reduce our estate by 50% across all sites by 2027.
- Implement a green procurement policy in 2022 for purchased goods and services
- Migrate our cloud solutions to carbon neutral servers.

Operations:

- Develop a decarbonisation roadmap for our heavy-duty fleet in 2022.
- Electrify 100% of our fleet (vehicles owned or operated on behalf of our clients) by 2028.
- Develop a strategy to ensure our reports and other information is accessible to all regardless of any impairment while supporting our ambition to become a paperless organisation.

Remote working:

- Include remote workers scope 3 emissions in our carbon reduction plan in 2023 and explore mechanisms to support employees to procure green power and heat tariffs.

Declaration and Sign Off

This Carbon Reduction Plan has been completed in accordance with PPN 06/21 and associated guidance and reporting standard for Carbon Reduction Plans.

Emissions have been reported and recorded in accordance with the published reporting standard for Carbon Reduction Plans and the GHG Reporting Protocol corporate standard³ and uses the appropriate Government emission conversion factors for greenhouse gas company reporting⁴.

³ <https://ghgprotocol.org/corporate-standard>

⁴ <https://www.gov.uk/government/collections/government-conversion-factors-for-company-reporting>

Scope 1 and Scope 2 emissions have been reported in accordance with SECR requirements, and the required subset of Scope 3 emissions have been reported in accordance with the published reporting standard for Carbon Reduction Plans and the Corporate Value Chain (Scope 3) Standard⁵.

This Carbon Reduction Plan has been reviewed and signed off by the board of directors (or equivalent management body).

Signed on behalf of the Supplier:
